North Jakarta, Indonesia | +62 857-5036-4678 | rojagatrafie@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

EXECUTIVE SUMMARY

Recent Informatics graduate from Universitas Pembangunan Nasional "Veteran" Jakarta with practical experience in Android, Front-End, and AI-integrated development. Focused on building responsive, user-centric applications utilizing modern Kotlin standards, React.js, and Machine Learning models. Experienced in applying Clean Architecture, MVVM patterns, and leveraging Generative AI to deliver scalable and intelligent digital solutions. Actively seeking internship or entry-level opportunities to contribute to impactful software development.

EDUCATION

Universitas Pembangunan Nasional Veteran Jakarta
Informatics, Faculty of Computer Science
GPA: 3.89/4.00

South Jakarta, Indonesia
August 2022 – July 2026

TECHNICAL SKILLS

Mobile Development: Kotlin, Jetpack Compose, Android Studio, Retrofit, MVVM, Kotlin Coroutines, Jetpack Paging 3, Material Design

Front-End Web: React.js, Next.js, JavaScript, Tailwind CSS, Bootstrap

AI & Machine Learning: Python, Machine Learning, Scikit-Learn, Prompt Engineering, Generative AI (ChatGPT, Gemini, IBM Granite)

Back-End & Databases: Node.js, Express.js, RESTful API, MySQL, Firebase

Tools & Version Control: Git, GitHub, Postman, Visual Studio Code, Figma

EXPERIENCE

Bank Mandiri x Rakamin Academy

Remote

Project-Based Virtual Intern: Mobile Apps Developer

March 2026

- Engineered the "Mandiri News App," a dynamic Android application encompassing 3 main screens that consumes 3 REST API endpoints to display real-time data using modern Kotlin standards.
- Architected the MVVM pattern for clean code separation, leveraging Retrofit, Kotlin Coroutines, and Jetpack Paging 3 to formulate a seamless endless scrolling feature.
- Successfully completed the intensive internship program, earning an "Excellent" predicate with a final average score of 88.71/100.

Kelompok Studi Mahasiswa (KSM) Multimedia UPN Veteran Jakarta

South Jakarta, Indonesia

Head of Web Development Class

February 2025 - January 2026

- Spearheaded a mentoring team of 2 to instruct 26 students in Front-end and Back-end Web Development, orchestrating a comprehensive curriculum that culminated in Capstone Projects.
- Represented the organization as a speaker for the "Multimedia Vibes Project" (MVP), delivering interactive presentations on web development to 30+ students at SMA PKP Jakarta Islamic School to foster early technological interest.

Himpunan Mahasiswa Informatika (HMIF) UPN Veteran Jakarta

South Jakarta, Indonesia

Staff of Information and Technology

January 2025 - January 2026

- Directed the "CodeVox" educational program by producing and refining 5 technical video tutorials for the HMIF YouTube channel.
- Mentored and guided 15 incoming Informatics freshmen during the MABIM onboarding program, facilitating their academic transition and fostering a supportive campus environment.

PROJECTS

Sleep Quality Classification & Recommendation App (Undergraduate Thesis)

October 2025 - June 2026

Machine Learning & Mobile Developer

Technology: Kotlin, Android Studio, Python, Machine Learning (Random Forest)

- Engineered a health-focused Android application integrated with a custom Random Forest machine learning model to accurately classify and analyze user sleep quality.
- Trained and optimized the classification algorithm using comprehensive health datasets, achieving 92.06% predictive accuracy to fulfill undergraduate thesis requirements.
- Constructed an intuitive user interface utilizing modern Kotlin standards, ensuring seamless user data input and real-time visualization of sleep analysis results.

Personal Portfolio Website

September 2025 - January 2026

Front-End Developer

Technology: React.js, Tailwind CSS

- Engineered a highly responsive personal portfolio website to systematically exhibit 5+ software development projects, academic milestones, and professional experiences.
- Optimized site architecture and user interface, securing cross-browser compatibility and rapid page load performance across all device viewports.

CinemaZone - Movie Ticket Booking App

Mobile Developer

Technology: Kotlin, Firebase, Android Studio

- Constructed a movie ticketing application highlighting 4 key implementations: secure authentication, QR Code generation, real-time seat selection, and a user wishlist.
- Incorporated 2 real-time Firebase services to guarantee instantaneous data synchronization across all user devices.

May 2025 - June 2025

Planetku (Smart Waste Management App)

Mobile Developer

Technology: Kotlin, Android Studio, Firebase, Machine Learning, Google Maps API

- Partnered on a Bangkit 2024 Capstone Project, attaining 90% AI accuracy in classifying 5+ distinct waste categories.
- Programmed interactive tools, including a carbon footprint calculator and a waste bank locator, to advance environmental sustainability.

October 2024 - December 2024

Computer Crafter Website

Full-Stack Developer

Technology: HTML, CSS, JavaScript, Bootstrap, PHP, MySQL

- Forged an interactive PC building simulator powered by a database of over 50+ hardware components for user customization.
- Devised compatibility logic yielding a 100% success rate in identifying hardware mismatches, thereby eliminating assembly errors.

May 2024 - June 2024

TRAINING & CERTIFICATION

Bangkit Academy (Google, GoTo, Traveloka)

Mobile Development Cohort

Remote

September 2024 - January 2025

- Executed 900+ hours of intensive Kotlin-based Android development training, prioritizing clean architecture, UI/UX principles, and API integration.
- Coordinated with a cross-functional team of 6 members to finalize a Capstone Project under industry expert mentorship.

Badan Nasional Sertifikasi Profesi (BNSP)

Programming Assistant

February 2026

- Validated core programming competencies by compiling, testing, and debugging software modules across 2+ languages.
- Conquered comprehensive practical assessments by optimizing algorithms and solving 10+ complex logic problems within strict time limits.

Amazon Web Services (AWS)

AWS re/Start Graduate

Remote

October 2025

- Fulfilled a rigorous 12-week (400+ hours) cloud computing program encompassing Linux fundamentals, Python, networking, and security.
- Provisioned 5+ core AWS services (e.g., EC2, S3, IAM, RDS) in simulated enterprise environments to gain hands-on operational experience

Hacktiv8 & IBM SkillsBuild

Student Development Initiative - Code Generation & Optimization

Remote

July 2025

- Mastered the practical application of generative AI models, specifically utilizing IBM Granite, to accelerate software development lifecycles through automated code generation, refactoring, and debugging.
- Optimized development workflows by implementing advanced prompt engineering techniques, significantly enhancing code efficiency, quality, and maintainability.

Google (via Coursera)

Google AI Professional Certificate

Remote

August 2026

- Mastered practical AI applications across a comprehensive 7-course program, specializing in prompt engineering, data analysis, and AI-assisted coding and app building.
- Engineered a portfolio of 20+ AI-generated artifacts and developed a custom AI solution, demonstrating proficiency in evaluating AI outputs and leveraging generative tools to solve complex technical challenges.
